

IN THE CLAIMS:

Please amend the claims as follows:

1 to 13. (Cancelled).

14. (Currently Amended).

A process for the production of a multilayer composite material (1, 21) with a plastic layer (4, 24) that has release properties with respect to adhesives comprising

locating materials producing the release properties within the plastic layer, wherein a first web (2, 22) is provided in production of the composite material (1, 21) on one side of which a layer of adhesive (3, 23) is located, and said adhesive layer is always coextruded together with the plastic layer (4, 24) with the release properties, which is in turn bonded to a second web (5, 25); and

wherein said first web and said second web is selected from the group consisting of paper, metal foil, and non-woven fabric.

15. (Cancelled).

16. (Cancelled).

17. (Cancelled).

18. (Previously Presented).

Process according to claim 14, wherein the layers are extruded onto the first web (2, 22) simultaneously by the coextrusion process.

19. (Cancelled).

20. (Currently Amended).

Process according to claim ~~19~~, 14, wherein the layers including the first web (2, 22) are extruded onto the second web (5, 25).

21. (Previously Presented).

Process according to claim 14, wherein at least the adhesive layer (3, 23) and the layer (4, 24) with the release properties are extruded between the two webs (2, 22 and 5, 25).

22. (Cancelled).

23. (Cancelled).

24. (Previously Presented).

Multilayer composite material produced in accordance with the process as described in claim 14, wherein a first web (2, 22) and at least a second web (5, 25) are provided, between which a layer of adhesive (3, 23) and a further layer (2, 24) that has release properties with respect to the adhesive are located.

25. (Previously Presented).

Multilayer composite material according to claim 24, wherein further layers (26) are provided that are located on the outside of the first web (2, 22) and/or the second web (5, 25).

26. (Cancelled).
